EDUCATION

UNIVERSITY AT BUFFALO, THE STATE UNIVERSITY OF NEW YORK
Master of Science, Management Information Systems (3.967/4)

June 2026

NATIONAL INSTITUTE OF TECHNOLOGY, HAMIRPUR

Dual Degree (B.Tech + M.Tech), Electronics and Communication Engineering (8.46/10 & 8.2/10)

June 2022

EXPERIENCE

ProHance

Bangalore, India

Technology Specialist

Apr 2023–Feb 2025

- Engineered full-stack application upgrades by migrating legacy UI(WinForms) frameworks to modern graphical presentation layers(WPF) and optimizing event-driven event handling using C#(.NET Framework 4.5 and above), React, Java and XML, improving system responsiveness by 25% of over 10,000+ distributed users.
- Optimized high-throughput REST API modules and caching layers, and integrated telemetry/observability layers accelerating feature delivery velocity by 30% while reducing latency across core system resources.
- Modularized legacy monolithic features into independently deployable service components using MVVM and clean architecture patterns, decreasing delivery timelines by 15% through rigorous unit testing.
- Utilized AI-powered development tools (Cursor, Claude, ChatGPT) within cross-functional teams to automate testing and debugging workflows, boosting engineering delivery efficiency.

Amdocs

Pune, India

Software Engineer

Jul 2022–Sep 2022

- Engineered production ETL data pipelines using Azure Data Factory and Snowflake, automating the ingestion and transformation of large-scale datasets for real-time reporting.
- Deployed and maintained application modules within Azure and Docker environments, gaining proficiency in virtualization and cloud-based systems troubleshooting.

PROJECT EXPERIENCE

Personal Knowledge Base (RAG)

- Engineered a privacy-first RAG application using LangChain, ChromaDB, and Google Gemini 2.0 Flash, enabling natural language querying over private PDF documents with zero data leaving local infrastructure.
- Designed an end-to-end document ingestion pipeline using PyPDFLoader and RecursiveCharacterTextSplitter with overlapping 1000-character chunks, optimizing context retention across LLM context windows.
- Implemented dense vector search using Google's text-embedding-004 embeddings persisted in ChromaDB, enabling low-latency top-k semantic similarity retrieval to ground LLM responses and eliminate hallucination on private datasets.
- Architected a strict LangChain prompt orchestration layer that constrains Gemini inference exclusively to retrieved document context, enforcing hallucination-resistant, citation-grounded responses for enterprise-sensitive data use cases.

Neural and Phrase-Based Machine Translation

- Developed a hybrid translation and text classification system in Python and PyTorch, integrating BERT-style Transformer architectures with statistical phrase-mapping layers to process asymmetrical language pairs.
- Leveraged FastText classifiers and custom preprocessing pipelines to execute text normalization and data imputation across asymmetrical datasets, achieving a 4.4 BLEU evaluation score.

SKILLS

Programming Languages & Frameworks: Python, C#, C++, ASP.NET, Java, React, Go, PostgreSQL, Bash, Linux Internals JSON, XML, XAML, Typescript, JavaScript, HTML5/CSS3, .NET, .NET Framework, LINQ, SQL.

AI & ML: LangChain, RAG Pipelines, Agentic Workflows, NLP Frameworks, BERT, FastText Classifiers, Intent Classification, Query Normalization, Tokenization, Information Retrieval, Cursor, Claude Code, GitHub Copilot, PyTorch, scikit-learn.

Backend & Cloud: WinForms, WPF, GCP, Azure, Microservices Architecture, Apache Spark, Kafka, AWS (Lambda, S3, RDS, EKS), ECS, DynamoDB, MySQL, Distributed Storage, RESTful APIs, SQL Databases, Asynchronous Programming.

Software Engineering: Object-Oriented Programming, Telemetry & Observability, Terraform, Agile (Scrum/Kanban), TCP/IP networking, Load Testing, System Debugging, Common Design Patterns (Singleton, Factory, Observer), Windows Services, Asynchronous Programming, Multi-threading, Performance Optimization, Technical Documentation, Data Structures and Algorithms, System Troubleshooting & Debugging.

Technologies: Kubernetes, Docker, JIRA, CI/CD (Jenkins, GitHub Actions), Git, SVN.

CERTIFICATIONS: Google IT Automation with Python Professional Certificate
